

Fawaz Almeer, Abdulrahman Alzamil, Mohammed Alazmi

Functional:

1. The student and administrator shall be able to access the system by providing username and password, and linking it with an existing encrypted user in the database.
2. The student shall be able to retrieve information about the available courses through a list accessed from the courses menu from the database.
3. The student shall be able to register the courses by selecting the available courses from the list, and the course will be added to their schedule in the database if they meet the requirements.

Non-Functional:

1. Capacity: The system shall be able to sustain all the students and administrators without crashing or overloading.
2. Usability: The system shall be easy and intuitive to use, requiring no training.
3. Security: Data shall be encrypted such that only administrators can edit or change it.
